

## Introducing Clinical Spark: Smart in-workflow messages, supported by partners.

A lightweight messaging panel inside the EHR that surfaces timely, practice-friendly information, patient education, and partner offers — without getting in the way.

Modern practices are asked to do more every year — new programs, new payer requirements, new tech. We're adding an in-workflow message experience inside ChartLogic to help you see useful updates right where you're already working.

### Why you're seeing this:

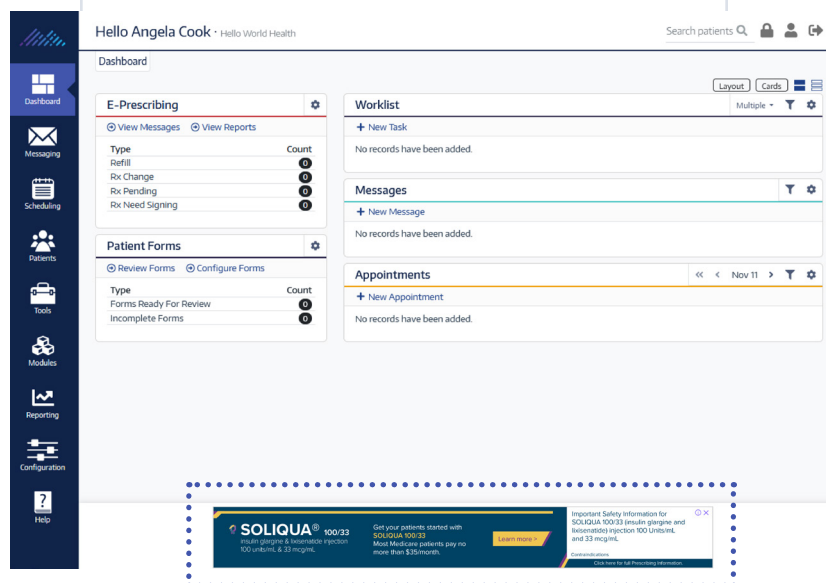

To keep delivering new EHR capabilities, we're introducing a small, in-app message space that is offset by sponsor support. That means more enhancements for you, while keeping your subscription costs predictable.

### What this is not:

- **Not** reselling your practice data
- **Not** adding extra clicks to complete a note
- **Not** changing your clinical decision-making

### What we optimized for:

- **Low disruption:** messages appear in a consistent, predictable location.
- **Healthcare-specific:** content is limited to healthcare/professional topics.
- **Transparent labeling:** you'll always know who the message is from.
- **Actionable:** most messages point to something useful.

**SOLIQUA<sup>®</sup> 100/33**  
insulin glargine & lixisenatide injection  
100 units/mL & 33 mcg/mL

Get your patients started with  
**SOLIQUA 100/33**  
Most Medicare patients pay no  
more than \$35/month.
